

Skido TalentServe

Project Rough Report

Samanway Maji

IDE – Android Studio 2021.2.1

Design: The design is made in Figma, although for our use, we may use Flutterflow as well.

Frontend: The frontend will be made using Flutter.

Probable Tech Stack:

1. Flutter SDK

2. Dart

3. State Management:

- Provider
- BLoC
- Redux
- Getx
- Riverpod

4. Backend:

- Node.js with frameworks like Express.js
- Python with frameworks like Flask or Django
- Ruby on Rails
- PHP with frameworks like Laravel

5. Database:

- SQLite
- Firebase
- MySQL, PostgreSQL, or MongoDB

6. Third-Party Packages

Hosting the app:

- **For Distribution:** It can be done on the Google Play Store by creating a developer account on play store and listing the apk on the play store and then release it. For iOS, the same can be done through the iOS store, by enrolling into the Apple Developer Program
- **For Backend Functionality:** For this, we may use cloud providers like the AWS, GCP or Azure, or PAAS providers like Firebase and Heroku, or own server.
